

Supplementary figure 6.

Supplementary Figure 6. Pre-gating and FMO controls for CD25 and FoxP3 expression.

CD4⁺ T cells were purified and incubated with LPS-stimulated control DCs. At day 4, cells were collected for flow cytometry. **(A)** Representative dot plots of FSc vs SSc, single cell gating (FSc-H vs FSc-A) and CD4⁺ gating. **(B)** Representative dot plots showing fluorescence minus one (FMO) staining controls (minus anti-FoxP3-Alexa 488 and minus anti-CD25-APC) for lymphocytes co-cultured with control DCs.
